

Unity Asset Pack

Thanks for buying our Unity animation pack!

This is a set of motion capture animations recorded in our studio performed by a professional actor/dancer. The motions have been cleaned and looped so that they are ready for use in your project.

In the project files you will find a folder containing the animations on our 'Awesome Dog Android' character setup as a Humanoid rig type. Each motion has been setup with an animation controller and placed in a demo scene for you to view. The demo scene has a flyby camera you can control with the WSAD and the mouse controls. The motions will also work as legacy animation type if you wish to use that system.

We have included an additional zip folder with this project containing the animations in FBX format should you wish to edit them in an external application. We have also included a T-Pose in this folder which may be helpful if you want to retarget them.

If you have any issues with this motion pack please contact us at support@awesomedog.com

I hope you enjoy these animations and find them useful for your project.

Kind Regards,

Jim Clark
